📄 Trumpas pristatymas

An adaptable and conscientious ICT Engineering graduate looking for work as a Java software developer where he could utilize the experience gained in 4 years of studying and be challenged to learn new technologies.

During semester group projects he designed and implemented user interfaces, used design patterns, built the architectures of single user, client / server and distributed systems with databases.

After returning to Vilnius, Lithuania in 2016, he further developed his skills while working on software projects mainly in the public sector. He used database and web service development languages like Oracle SQL, PL/SQL, and Java.
